

Java Conditional Statements

* flow of Control
→ Code is executed line by line after compilation

if () {
 // if block
}

condⁿ → Execute when condⁿ is true

if else block:

```
if (condition) {  
    // execute when condn is true  
}  
else {  
    // execute when condn is not true  
}
```

switch Statements

more optimized

```
int i = 3;  
switch (i) {  
    case 1:  
        // Statement  
        break;  
    case 2:  
        // Statement  
        break;  
    default: // code  
        break;  
}
```
